**DETAILED ACTION**

***Priority***

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claims 1-4 are rejected under 35 U.S.C. 102(a) as being anticipated by Kundorf (WO 99/09763 which has the corresponding translation of U.S. Publication No. 6,553,217 B1).

Referring to Claim 1, Kundorf teaches a method for the setup and charge-related billing of a telecommunication connection from a telecommunication line unit of a communication network to a target telecommunication line unit, the method comprising the steps of:

controlling the setup of the telecommunication connection with an intelligent network OP/SP (fig. 1);

providing, via the intelligent network, bits of information required for the charge-related billing PNL (fig. 1);

charging the telecommunication connection at a preference charge rate when the target telecommunication line unit belongs to a previously made selection of target

telecommunication line units, and charging the telecommunication connection at a charge rate that is more expensive than the preference charge rate when the target telecommunication line unit does not belong to the previously made selection of target telecommunication line units (see ABSTRACT).

Referring to Claim 2, Kundorf also teaches querying from a data memory allocated to the intelligent network whether the target telecommunication line unit belongs to the selection of target telecommunication line units (see ABSTRACT).

Referring to Claim 3, Kundorf also teaches forwarding the bits of information required for the charge related billing to a charge unit BC (fig. 1), which is present in the communication network for the charge billing, after the telecommunication connection has been completed (see ABSTRACT).

Referring to Claim 4, Kundorf also teaches reducing a prepaid charge credit by the intelligent network by an amount deriving from a duration of the telecommunication connection and one of the preference charge rate and the charge rate that is more expensive than the preference charge rate (see ABSTRACT).
